Q: Is downvoting a question allowed here? I thought this could work as a comment to the question. The OP asks about a edit rule. There is no answer, just a comment that it is a bad question. But maybe it should be closed or deleted. And I wonder if it is allowed, then it also could be done in other areas, not only askubuntu.com So, is it allowed here? A: Downvoting is allowed and encouraged on this site, just like anywhere else on the StackExchange network. Please don't consider it rude. A: I would encourage you to vote as you feel appropriate and to avoid the judgment and victim mentality that this question fosters. A: First off, you shouldn't be downvoting questions just because you don't know the answer to them. A question which isn't easily answered by google and where the relevant tag isn't added can be marked as a duplicate and left open for those that know the answer. But back to the question: Saying that a question is bad is OK. Just check if it fits the quality guidelines of the site. If you feel that there is a lot of work, and you are unable to judge if this is the case, flag it for moderator attention. In this case I agree with David in that it is a duplicate. You can of course always speak to other users about the question and tell them that you think it is too bad. Just be careful to not instigate a flamewar. As an end note: Yes downvoting is allowed and encouraged. Just do the proper flagging of the question first and see if you are able to prevent further downvoting. NASHVILLE, Tenn. Q: ASP.NET MVC 4 Web API: Return JSONP instead of JSON In my web API I want to return JSONP instead of JSON by using the Content-Type header. I've found this question which is kind of answered, but it's not my case, because the output type has to be application/json, but in my case I want to return application/jsonp as the response type. I don't want to have the script tag in my output. I know how to achieve that with a workaround, but I want to fix my code and use the content type header to do that. A: I think you can override the GlobalConfiguration.DefaultFormatters.JsonFormatter. If your code is in this namespace: namespace MyProject.WebApi.GlobalConfiguration { public class MyJsonFormatter : JsonMediaTypeFormatter { protected override void SetContentFormat(System.Net.Http.HttpContent content, Type type) { // Find your JsonFormatOptions object and set it here! } } } Reference: ASP.NET Web API JSONP support to support JSONP Pharmacologic Properties of the New Anti-Infective Agent Sutept: Antifungal Activity and Bioavailability in Rats. Sutept [(S)-2-methyl-4-thiazolylglycylhydroxamic acid], a new antifungal agent active against dermatophytes, Candida spp., and molds, is a hydroxamate of the L-thiazolidine-4-carboxylic acid class. The pharmacological properties of this new antifungal agent were studied in Sprague-Dawley rats. A water-soluble prodrug of the agent was synthesized by treatment of

Sutept with t-butyldimethylsilyl chloride in hexane. The crude product was purified and a final product was obtained after treatment with dichloromethane. The pharmacokinetic properties of Sutept were determined following

Compatibility and Control Options: Test Specs: Links: I've never been a huge fan of iPhone developer articles because the reviewers always seem to focus on how smooth the app is instead of how well it works. Most importantly, I've never really seen much mention of the controls or features of any app. So I'm happy to say that I finally caught my first sample of the new audio engine under iOS 6 and was really impressed with what I saw. Here are some quick notes on the engine and a few of the controls. The most obvious
