Technical Field The present disclosure relates to an apparatus and a method for checking anti-counterfeit identification (ACI) and a system thereof, and more specifically, to an apparatus and a method for checking ACI by using a DC power supply, and a system thereof. 2. Description of Related Art During a transaction process of a product, such as a DVD, a customer shall check whether or not the product is a genuine product. There are many dishonest methods of counterfeiting identification card, such as printing with a low-viscosity ink, detaching the ID from the original ID, and even making a copy for the same ID. If the ID cannot be matched to the original, the product shall be deemed as a forged product. Such forgery can be easily achieved by copying the genuine product, which costs a low amount of money, and the producer may bear the loss. The counterfeit product usually has the same or similar ID content as the genuine product. Thus, the ID is a vital factor for the product inspection. However, the ID is printed on an original ID card by a computer printer. If the original ID is counterfeited, the output ID of the computer printer may be damaged, which will decrease the content of the ID and the quality of the product, and the product is usually considered as a forged product. Hence, how to inspect the ID content of a product, such as a DVD, is an important subject. Q: Why is the top answer not accepted? Why is the top answer marked as not accepted?
