A sample of what was possible with this API is the "Use Cases" module. License and Autodesk Exchange Apps AutoCAD is a multi-platform software application that is provided as a part of a complete subscription which includes DWG and other software products such as AutoCAD Architecture, AutoCAD Electrical, AutoCAD Electrical Design Professional, AutoCAD Civil 3D and other products. This product can be used on a single PC or on the internet via a paid subscription. Many parts of AutoCAD functionality can be turned on or off by the user. This is done through a command called "Legal Templates". A template (i.e. a document with all the legal settings) can be purchased from Autodesk or shared from within the Autodesk Exchange Apps. The user can remove, add or edit templates on the fly. The functionality provided by the legal templates is complemented with programmatic settings that can be applied to the software. There is a licensing scheme

for AutoCAD wherein three types of licenses are sold: AutoCAD Workstation, AutoCAD LT Workstation, and AutoCAD LT. The Workstation license provides complete access to all the features of the software, including the ability to use all the drawing commands and tools of the software without limitations. Workstations are purchased by businesses, organizations and schools. AutoCAD LT Workstation is priced at a discount compared to Workstation and provides fewer features. It is designed for individuals and students. Some of the features that are part of Workstation but not LT include: the ability to use ribbon, the ability to save and open files from multiple drives, the ability to import and export drawings and native 2D TIFF images, and the ability to define and modify the user interface. A number of Autodesk Exchange Apps are available for AutoCAD LT. Automation in AutoCAD The basic steps to writing AutoLISP code are: Prepare the AutoLISP function to be run Define the function arguments Create a function definition Instantiate the function Execute the function There
