It is used by industry professionals who need to design, draw and view a 3D model, while working together remotely on the design. This allows for the design of products, which are composed of the CAD model and a series of product images that are attached to the model. After the CAD model is created the design team can add new product images and manipulate the model using the Design Web collaboration tools. The benefit of using this extension is that designers can not only work with the model they created using AutoCAD, but they can also create new models based on the existing model and attach them to it. This allows a designer to not have to worry about saving their work because if they make a mistake they can easily reload the project to start from scratch. Another benefit of using the Design Web extension is that the 3D models created with AutoCAD can be viewed in a web browser on any machine.
