When you reach 40, you can expect wrinkles, pigmentation and other signs of aging. Although the positive effects of aging can be seen easily, there are many things you can do to prevent and treat those signs. It is a known fact that the amount of collagen that you have decreases when you get older. For many women over 40, they complain about skin pigmentation and wrinkles. If this is the case, you can get them taken care of. Fortunately, there are many things you can do to prevent and treat your aging skin. Take a look at what you can do to get your skin at a healthy and vibrant state. 1. Make sure you are getting enough sleep. You know the adage that "sleep is important." Well, this is true when it comes to aging. When you get enough sleep, it will help you to keep your skin supple and elastic. When you get a lot of sleep, you will get your body rejuvenated and revitalized. Sleep helps to reduce the amount of wrinkles on your skin and repairs your skin after a hard day's work. 2. Make sure you are giving your body enough rest. Working all day, every day can actually take a lot out of you. Your body needs rest to rejuvenate. When you get a lot of rest, your body has the time to repair and rejuvenate. Your body will make more collagen and elastin that can fix the skin and help you to have a youthful appearance. 3. Make sure you are eating right. Even though you are in a good weight, you should be keeping your eyes on the nutrition you are getting. Eating the right foods is an excellent way to stay healthy and youthful. The diet you choose should help you to stay younger and healthier. Getting all the vitamins and minerals you need can help you to have a youthful appearance and a youthful heart. 4. Make sure you are doing the right kinds

I have a point and a polygon layer which I want to intersect to get a result where the polygon features are inside the ring and the point features are not. The problem is that it is returning the original polygon layer with the addition of the point features. Here is a screenshot: Any ideas? SELECT ST_Intersects(ST_GeomFromText('POINT(-122.43437052 34.78683730)', 4326), ST_GeomFromText('POLYGON((-122.42149066 34.76450948,-122.44381757 34.78769946,-122.4451382 34.79153013,-122.4215586 34.79686931,-122.4214090 66.84621888,-122.43437052 34.78683730))', 4326), true); A: ST_Geometry() orders your input data "bottom-up" from the inside-out. This will be convenient for polygons. It's more convenient to "order" the input data top-down. The second argument is a "direction" in this case, so you can specify GEOMETRY BOTTOMUP for your input geometries. Thus we get the result
