GIMP Gimp (gimp.org) is another free, open-source photo editing program. The name Gimp stands for \_GNU Image Manipulation Program\_, and it is used to describe the software that it is. Gimp has a layered-based user interface that you can use to make large or small adjustments to an image. It also allows you to merge layers to create special effects, including overlays. Like Photoshop, Gimp also allows you to create color adjustment layers. However, Gimp is known for its features that aid in the retouching of an image, such as dodging and burning, and it can make use of the specialized photo editing plugins created for GIMP.

Food allergy: a review of current concepts and controversies. There has been considerable recent progress in the study of food allergy, especially in the area of diagnosis, and in elucidating the pathogenesis and in the basic immunology of the syndrome. This paper reviews the current state of knowledge, and discusses aspects of diagnostic and therapeutic strategies. There is a correlation between the occurrence of early life food allergy and subsequent development of other atopic diseases. Since food allergy may be a prerequisite to allergic diseases, it is important that early diagnosis and treatment can be given to children. The validity of the double-blind placebo-controlled food challenge as a means of accurately diagnosing the syndrome has been questioned. Further studies are required to assess the relevance of nonspecific changes in the gastrointestinal tract, local or systemic reactions, and the risk of reintroduction of food allergens. This invention relates to improvements in trailer hitches, and in one particular to a hitch which provides a quick connect and disconnect operation between the trailer and the tow vehicle. Various trailer hitches are available, but none provide quick connect and disconnect as defined in the following specification and claims. In particular the invention provides a ball type joint which is easily connected and disconnected from the trailer tongue. More specifically this invention relates to trailer hitches utilizing a ball-type hitch which is connected to a support within a trailer. The support is fixed to the trailer body or a portion of the trailer body which is pivotally connected to the trailer body for movement between a first position, where the support is located above the trailer body, and a second position, where the support is located beneath the trailer body. In a typical application the support is in the first position when the trailer is supported on a tow vehicle. A quick connect and disconnect mechanism moves the support between the first and second
