Hextones is a pseudo-clone of the original Ocarina of Time. You play as a male or female Kokiri, with the goal of accessing the four Hekirikiri trees and collecting the hextones in order to complete the game. In Hextones, Link is a young boy trying to traverse the lush, green valleys and forests of Hyrule, and in the wake of the great war between the Horde and the Alliance, the evil wizard known as Ganon is free and terrorising the world. You, Link, must collect all four hextones and enter the dungeon called Kakariko (Uzura in Japanese) to confront Ganon and end the suffering of Hyrule. Since hextones is based on the Ocarina of Time, it's also familiar to fans of the original game and has many of its features. You can buy Hextones on Amazon. There's no overhead view, but there are 3D graphics. There are 8 hextones in hextones, which you collect by talking to the various inhabitants of Hyrule. You don't have a quest, and there's no way to skip the dialogue and just jump right to the hextones. You can't even skip the he
