# 2019 New in Photoshop Elements 19

## 388ed7b0c7

Q: How do I modify a style of a component in a parent component in React Native? How do I modify a style of a component in a parent component in React Native? My goal is to have a component that can encapsulate existing components, but I want that encapsulated components have their own style. How do I make it? A: You should pass the styles as props to the component, and set them as styling for the component. E.g. Parent: `import styled from 'styled-components'; const Parent = styled.View` flex-direction: row; border: 2px solid; padding: 10px; margin: 10px; `; export default Parent; Child: import React from 'react'; import {`

---

View } from'react-native'; const Child = (props) => { return ( ); }; export default Child; This would render Note that root will receive the same style as child, but be applied to the parent component. Q: Necessary to have an NSSortDescriptor to sort a List of simple Core Data objects? My fetch request returns a list of objects like this: "event": "appearanceName": "name of the event", "date": "29 July 2016" "venue": "name of the venue", "address": "name of the address", "city": "name of the city", "state": "name of the state", "country": "name of the country" I want the List to be sorted by name of the event. I add a sort descriptor to the fetch request: [NSSortDescriptor sortDescriptorWithKey:@"appearanceName"

---

ascending:YES]; But when I print the contents of the list, the sorted items are all out of order.

#### What's New In?

Successful treatment of recurrent deep vein thrombosis despite the absence of objective risk factors. A patient with recurrent venous thromboses received anticoagulation for more than 2 years after a first episode of venous thrombosis in the same lower limb. The patient is a woman aged 53 years, living in a town with a population of about 500,000, in a low-risk geographic area. She did not have any personal or family history of thrombosis. Immunological evaluation showed a lower risk of

---

thrombosis. She had 2 recurrences, one after 2 months and one after 6 months. The reason for this recurrence could be a paradoxical embolism during the first attack of venous thrombosis. The patient was successfully treated by anticoagulant therapy combined with the sequential administration of warfarin and heparin. In addition, she received low-molecular-weight heparin (Enoxaparin, Clexane). After 1 year, the patient has had no more recurrences. This patient represents a good example of a subgroup of venous thrombotic subjects who are at low risk of recurrence and who have no other risk factors for recurrent thrombosis.

Q: Why does a box-shadow not extend the element bounds I have the following

---

code for which I need to set a box-shadow, however when the box is clicked I need to scroll the contents into view:

```
body { margin: 0; padding: 0; }  
.container { width: 100vw; height: 100vh; background: black; overflow-x: hidden; overflow-y:
```

---

### System Requirements:

Windows 7 and later (32-bit or 64-bit version of the operating system is required) 1GHz CPU 1024 MB RAM 500 MB available hard disk space Basic installation instructions: Download and install the "Intel(R) x86 CPU Driver (Windows 7, Vista, Service Pack 1, and later versions)". Download and install the version of the nVIDIA driver for the Linux operating system that corresponds to your current nVIDIA graphics card. Unpack the single.zip file and extract the contents to a folder
