The new gameplay improvements include improved ball physics, new passing and shooting animations, speed controls and more. Additional improvements include the inclusion of a “corrective AI,” which will push players off the ball to help position their team. You can check out a full list of the improvements in FUT 22 below: Ball Physics Improvements “Physics is the foundation of any game. FIFA 22 has a more intelligent algorithm to improve the way the ball behaves and displays the correct roll and spin while keeping the ball's responsiveness.” said Gareth Horne, Product Director at EA SPORTS FIFA. “Improved ball physics results in more accurate balls moving more consistently, controlling all parts of a shot and creating more opportunities in FUT.” Provides more options for players wanting to drive with their outside foot. “Improved drive deciders prevent players from hitting the ball too low or high, and ensure that players aren’t aiming for the wrong feet, or hitting the ball too far from their body,” added Horne. Additional Real Player Statistics The new and improved player stats in FIFA 22 integrate with new contextual information that players

---

have access to in-game. Players now gain access to contextual in-match data, such as goals, shot attempts and game statistics. The new stats include:

- Added Goal Attempts
- Added Shot Attempts
- Added Game Stats
- Added Game Statistics per Club
- Added Player Ratings Partnered Real Player Statistics

Partnered data, such as goals, assists, dribbles and passes, is now available on stats pages for your player. The information is interactive and players can see how their stats correlate with teammates as the game continues. Supports up to 2x2 cross-tag.

- Supports up to 4x4 cross-tag

Supports in-game data for Ultimate Team & Pro Clubs. FUT Ultimate Team

- Added Player and Goalkeeper animated highlights.

Improved Goal animations:

- Improved the consistency of hitting the target
- Improved animation transitions when players are in contact
- Improved animation transitions when the player uses a substitute (avoids moving the player)
- Improved visualization of how the ball moves in different situations

- Added Goalkeeper animations.
- Improved the consistency of hitting

## **What's new:**

- **KEY CHANGES:** - The penalty area has been reviewed. Our teams gave feedback on this this year and our feedback was adopted, so this is the first time our review panel made the final decision. - A review was also made regarding the testing of players who are in their first year of being eligible as part of the global initiative, so that's a key area we will focus on as we're further along with the review process. - The pitch system has been re-worked. We were continuously assessing all of the things which make up a FIFA pitch and making lots of changes to different aspects of the game. For example, the pitch in FIFA 22 uses more advanced technology and is much more accurate and reliable. More parks and pitches have been added throughout the game, whilst also tweaking their settings. - The way injuries are handled in the game has been modified and is now much more accurate. We're also introducing video reviews for muscle pulls, with a new reviewer panel and checking process. - The shooting system has been enhanced, which has meant we needed to take better care of the way FIFA handles the animations, so that we don't give the impression that players are invisible when they hit the ball. This year we added several settings in the shooting system. - AI has been improved. A system has been introduced to make it easier and more fair to force and tackle players. You can now force players to go into a push as well and force players to better respect their team mates. - New stadium features have been added for more creativity in the exterior. - There will be new commentary and more ways to make your squad talk more. - There have been many tweaks to the ball impacts and physics system. For example, we have added a new crown brake that is usually used during a corner and prevent a situation where the ball goes as quick as lightning whilst the player struggles to stay with the ball. We've also made the ball lighter. - The way the goalie plays has been drastically improved. We introduced the ability to interact between the goalie and the team. It was

---

**hard for the defenders in the offside situations, as they had to be careful, but we've addressed this. - A new forensic system has been added, which will help your team find the right supporters and sign them up. - We have introduced new animations for the new-look striker, supporting striker and wingback**
