Free A Forbidden Time Episode 7 - Episode 7.The effect of hydrodynamic forces on apomorphine-induced rotation in the rat. Hydrodynamic forces were used to produce a rotational asymmetry in the rat. A method was developed to deliver aliquots of apomorphine into the femoral artery. It was found that the more apomorphine solution that was injected, the greater the rotation of the animals. This finding suggests that there is a pharmacokinetic component to the phenomenon. Injection of a saline solution produced no rotation.(1) Field of the Invention The invention relates to a method and system for diagnosing a failure in an interconnection of components in a system, and more particularly to a method and system for diagnosing a failure in an interconnection of components in a system, utilizing a hierarchy of test clocks, where first-in first-out (FIFO) storage is incorporated in the test clock hierarchy to facilitate testing of the components. (2) Description of the Prior Art The system diagnostics of most modern electronic equipment is normally accomplished with a computer implemented test to diagnose the electronic equipment which has failed. Usually the test will be performed by a test engineer, and the results of the test will either be stored in a data base for review by a maintenance engineer, or communicated to a test engineer over a phone line. More recently, automated test equipment has been developed for performing automatic system diagnostics. Generally these units utilize a general purpose clock generator and a large number of test patterns to diagnose the components in an electronic system. One example of such a system is available from Test Systems Consultants, Inc. of Wheaton, Ill. and is known as the PROMPROCESSOR.TM. system. This system includes an architecture which provides a means for analyzing all system clocks and loop timing loops. The PROMPROCESSOR.TM. system allows a user to perform functional tests of a system and also provide for diagnosing faults and non-reproducible failures in an electronic system. Typically, the general purpose clock generator generates a single clock signal, and the operation of the clock generator can be controlled by a single control signal. A single clock generator can then be used to drive all circuitry in the system under test. Each of the components 6d1f23a050
