This invention relates to a liquid crystal display for a portable telephone, in which the electronic circuit board of the liquid crystal display module that converts digital image data to display it is installed on the outside of the telephone. Conventionally, in many cases, the display section of the liquid crystal display is built in the body of a telephone case, while the circuit board of the liquid crystal display module, which converts digital data into digital voltages for liquid crystal drive, is installed on the outside of the telephone body.
