A very helpful source of information to keep in mind is the National Academies' Science, Engineering, and Medicine Committee on Science, Engineering, and Public Policy for the United States; Research Priorities for the 21st Century. In sum, the report found that in the US, science and engineering are achieving their highest contribution to the economy in the past 50 years, while the research infrastructure and the capacity for dissemination are falling short of even current expectations. The report details priorities to preserve and expand our science and technology infrastructure and increase our capacity for better and faster dissemination of scientific discoveries and technological advancements. The report proposes steps to strengthen academic research and to increase public access to that research. It also provides recommendations to accelerate the effective communication and transfer of scientific and engineering knowledge and innovation. Jones, D.G. and A.Baker. 2009. PLoS One (6):167195. For a better future through science, interaction, education, and activism. Oxford: Graphene. Or of an interest the following, de Sherbinin, A. 2011. Faulty perceptions of non violent resistance and campaign success. Ecology & 5:1. de Sherbinin The Republic of South Africa faces a daunting demographic challenge as the proportion of its population that is black increases from less than half today to 77.9 percent in 2035. An important question concerns the intergenerational links between the country's racial composition and its political structures. To address the challenge, I employ an extended cross-national perspective that distinguishes between two "elements" of racial demographics: the first relates to the "host" population that a country has and the second relates to the "host" population that a country currently does (i.e., that is currently "in" a country). The distinctive approach adopts the V.A. Musunuru's paradigm of population history, which examines the differential exposures of the host population to racial environments that affect country-level political institutions. Extending this approach, I examine the independent and interactive effects of the host population's racial environment and the current composition of the host population on the outcomes that constitute a country's political structures. This has implications for various social and political issues, such as the links between race and inequality, racial stereotypes, urban poverty, and crime.
