in the 1990s, the trnsys development continued with the release of the trnsys thermal analysis engine (tae) in 1992. this version of trnsys was written in the c language, and the building simulation add-on was written in the trnsys w language. in 1994, the trnsys w language was

ported to the microsoft windows environment as a dos-based application. this version of trnsys was named the trnsys simulation studio. this version of trnsys was used by the trnsys project at nasa. the trnsys simulation studio allowed users to model multizone and multilayer buildings with the incorporation of interior materials, thermal and mechanical ventilation, radiant floor and wall insulation, and gains. it was also the first version of trnsys to allow for the interactive creation of building schedules. the use of trnsys by nasa and the university of texas was discontinued in 1996. in the early 1990s, the university of texas at dallas and the university of colorado at boulder released the first versions of the trnsys system design environment (sde) and the trnsys distributed control system (dcs). these versions of trnsys were written in the c language and were for the most part self contained, consisting of a collection of user interface applications, and a master controller for the trnsys building simulation. in 1997, the university of colorado at boulder released trnsys v17, which was the first version of trnsys developed for windows. trnsys v17 was released for the first time under the gnu public licence. in 1998, the trnsys development group at the university of colorado at boulder was spun off as a separate company, which is now named transient thermal solutions, llc. in 1999, the trnsys development team released the first version of trnsys for the macintosh platform and for windows under the gnu public licence. this version of trnsys was named trnsys simulation studio for macintosh and was based on the trnsys simulation studio for windows. this version of trnsys was the first version of trnsys to include occupancy modeling, comfort modeling, and energy simulation. 5ec8ef588b
