enbs, or enhanced natural beauty, are one of the most popular mods for skyrim. they're a graphical suite that aims to improve the visual fidelity of skyrim with post-processing effects and other features. enbs are often a necessity for games that aren't running smoothly. the majority of enbs are focused around the user interface, but the results can really be impressive. the modder who developed this one has worked to make skyrim special edition look more like skyrim in its original form, and the results are impressive. enb is a fairly simple concept, but it does require a compatible graphics card. the results are impressive, even when viewed on more modern machines. if you want to continue using enbseries, you will need to leave the in-game setting at default. if you have decided to keep the value higher, you can do so by editing the skyrimprefs.ini file (no users will have to adjust it in the ini editor in mo). once that's done, you can return enbseries to its defaults, or adjust it as needed. turning this parameter down to a lower usually results in sharper shadow detail; however, turning it

down too low can result in striping. users can adjust this setting from 0-7. if striping occurs while enbseries is enabled, increase this parameter's value by one, save the change, and test the new setting in-game. continue to repeat this process until the shadow striping is gone. usually between 3 and 5 are the best values. if you want to continue using enbseries, you will need to leave the in-game setting at default. if you have decided to keep the value higher, you can do so by editing the skyrimprefs.ini file (mo users will have to adjust it in the ini editor in mo). once that's done, you can return enbseries to its defaults, or adjust it as needed. turning this parameter down to a lower usually results in sharper shadow detail; however, turning it down too low can result in striping. users can adjust this setting from 0-7. if striping occurs while enbseries is enabled, increase this parameter's value by one, save the change, and test the new setting in-game. continue to repeat this process until the shadow striping is gone. usually between 3 and 5 are the best values. if you want to continue using

### **Uninstall Enb Skyrim Special Edition**

enb is an unofficial mod that changes the skyrim graphics. it is the most popular enb. enb stands for enbounce, as it bounces the player around the environment. it is designed to make the player feel more at home by changing the visual effects of the game. in this guide, you will learn how to uninstall the enb mod for the skyrim special edition. this guide will cover removing the enb completely, removing the enb interface, and removing the enb plugin from your load order. this guide will not cover creation club addons. when skyrim se is installed, tesv.exe uses its cache memory space to hold 3d objects and textures. this cache memory is both read and written to and from in very regular intervals by the game engine. the exact time interval is determined by the game's game.ini file. when the cache is full, the game engine will start evicting objects, textures, and other cache data from

---

the cache. in the case of skyrim se, the game only evicts cache data from the cache once a minute. this cache eviction is what causes skyrim se to be incompatible with enboost. the game ini file determines the cache eviction time, and if enboost is installed, it will alter this time. while enboost is in place, the game will write out to the cache at the same time as the cache is being written out to by the game, and will evict the cache at the same time the game is evicting the cache. this is a simple and elegant system for improving skyrim se's performance, but unfortunately, it cannot work if enboost is installed. enboost modifies the game ini file to alter the cache eviction time. 5ec8ef588b
