Q: What is a good reference for theory of piecewise isometries? I am writing a paper for an undergraduate class where I want to introduce the theory of piecewise isometries. I've seen some presentations of the theory online but they either require previous knowledge or present only a part of it. I am looking for a good reference, with very thorough treatment of the topic, preferably with proofs or at least full explanations. Any suggestions? EDIT: I'm looking for a textbook or any text which covers the topic thoroughly. The subject is mentioned here: [On the theory of piecewise isometries in Banach spaces](#) and a link to a webpage is given but this webpage has a problem.

A: This book is written by my student, I am almost sure that this is the most important reference. Influence of environmental parameters on the antioxidant capacity of lowbush blueberry, *Vaccinium angustifolium* Ait, in an extract rich in anthocyanins. Environmental conditions such as solar radiation, climatic and soil conditions influence antioxidant capacity in plants. The influence of these factors on the antioxidant capacity of lowbush blueberry (*Vaccinium angustifolium* Ait) was studied.
