Simulator is a software
solution for developers
who create, test and
debug GPS applications

and equipment. It simulates GPS signal indoor to maximize productivity. A professional grade application for developers Although the application is easy to install, it is not meant for beginners. It provides ample settings and options that require prior knowledge of developing and debugging. The

software can test GPS applications and equipment that run with the NMEA-0183 protocol. It offers various output interfaces, such as serial port (RS 232), TCP/IP, UDP, HTTP, Bluetooth, Virtual COM Port, Android (GPS Gateway App Bluetooth Server) and UUID based Bluetooth server. It can be employed to test

multiple types of equipment and under various testing scenarios. It is designed to run indoors for applications without visible GPS satellites signals. Test applications and calculate various variables The software provides five input modes, which allows you to track, calculate distances, pinpoint

latitude, and longitude as well as register magnetic variations for the same location. It offers support for most GPS capable devices, making it a useful addition to any developers who work with these types of equipment on a daily basis. There are plenty of things you can tweak and test. The help file is generous enough to

enlighten you on any problem you might have. Furthermore, there are various utilities, such as data forward manager, CRC calculator, NMEA sentence selector and logger. These come in handy when you perform actual developing and testing work. A software that targets a certain market Vutog GPS Simulator is an

application that is designed to perform certain tasks for developers. It provides ample options and features that are required when testing navigation software and equipment. It is sold in various editions, to cater to the needs of different types of users and businesses. It is precisely customized for expert

users. Nonetheless, it is worth trying out as it did not crash or display any errors during testing. Vutog GPS Simulator is a software solution for

KEYMACRO Keyword:

Keyword is a text string that is used to search and filter by keyword.

"KEYMACRO" Is the keyword that is used to search and filter by keyword. Keyword can be a single word, a phrase or a sentence.

Enter keywords separated by a comma.

For Example:

"keyword1,keyword2"

Keywords must be

separated by a comma. If you type keywords and a comma in the search box, it will search all keywords that have a comma, and not just the first keyword. You can search and filter by any keyword you type in the Search box. To search and filter a specific keyword, enter it, in the search box. For example: Lakeshore in Toronto, ON

Canada To search and filter a phrase, enter the phrase in the search box.

For example: Lakeshore in Toronto, ON Canada
keyword :sales, tracking, geofencing, iOS, android

SORTABLE

DESCRIPTION A column of the database has been added to the right of the search box. There you can see a list of keywords that have been saved in

your search history. Type one or more keywords in the box to add it to your history. You can also clear the history by clicking the red X in the history column. Since you have a list of keywords in your history, it will only display keywords that you have searched before. If you enter a keyword that is not in your history, it will

not be displayed. You can also clear the search history by clicking the red X in the history column. For more information about this feature, click the link below. KEYMACRO

Realistic GPS signal

Vutog GPS Simulator

boasts various realistic features. It utilizes a real satellite signal to keep the signal strength at an average that is available in your own area. You can simulate a real GPS signal and check your GPS application.

Innovative interface design The interface is designed in a way that will make it easier for you to operate the

program. You can easily navigate through the application's menus without encountering any issues. Optimized for most GPS devices Vutog GPS Simulator runs for most GPS devices. It also displays real satellite navigation without any hiccups. It features easy debugging and testing for a variety of applications. Allows you

to test GPS applications and equipment The program is designed to support various GPS products and applications, such as navigation applications, measuring devices, medical applications, and others. Fun for test and debugging Testing navigation software and other GPS-related products is easy with

Vutog GPS Simulator. It provides easy to use interface and high-quality output.

Screenshots (click to enlarge) Vutog GPS Simulator User Reviews Easy to use By max2018 I'm just a beginner in GPS software. But I can use this software and it is easy to use. So I can use it quickly. Great simulator By Sam3ds

This software is great for people like me who do not know how to use gps simulator. Good simulator By Mariano, PhD Good simulator, easy to use. Good simulation results. I am a computer engineer and the software is easy to use and perform most the function of a real GPS simulator. By Alex It is very easy to use and

powerful GPS simulator.
Very good product By
Otis P This is a very good
and very easy to use GPS
simulation software. Very
useful By Rabadiad It is
very easy to use and is
very useful for me
because I am a software
programmer and I need
to test and debug my
software to the highest
possible degree. Really
useful! By Misfoggy It is

not as expensive as the sim
