

FadeTop (2022)

FadeTop For PC (Latest)

FadeTop Cracked 2022 Latest Version is a simple and unobtrusive application that runs in the system tray and reminds you to take a break at pre-set intervals by gently fading the screen to a relaxing, user-configurable color. A relaxing, unobtrusive break-reminder FadeTop's purpose is twofold. It is designed to help people relax their eyes by reminding them to take a break once in a while and, at the same time, be as unobtrusive as possible. As such, the application is very easy to install, simple to configure and places very little strain on the computer's resources. When the pre-configured time interval is up, it gently starts fading the screen to a color or picture of the user's choice. This fading effect looks very smooth and is quite nice and relaxing to look at by itself. It can also be accompanied by a sound effect. As the fading effect advances, a number of elements become visible. The first, as well as the most self-explanatory is a clock. Beneath the clock a break trail is displayed. This is used to depict a history of the breaks the user has taken. If a break has been taken, it will be represented by a solid box. Below the break-trail a Health Index is displayed. This is the percentage of breaks taken as opposed to breaks that have been skipped. An easily configured application As mentioned before, the application's functions and settings can be accessed via its system tray icon and its respective right-click menu. The FadeTop Options menu enables one to configure the software's activity timeout and maximum opacity values, as well as the background and foreground colors. However, the application also features other settings which can be altered by modifying a few configuration files. These are not immediately obvious, but FadeTop's webpage provides an easy-to follow tutorial on how to do this. Conclusion This small and unobtrusive application is easy to use and configure. What's more, it does its job well, and can help you boost your productivity by keeping your eyes relaxed. FadeTop Requirements: Windows 2000/XP/Vista Internet Explorer 8.0 Windows Vista: Microsoft Windows® XP Service Pack 2, or later JavaScript must be enabled in your browser in order to utilize the functionality of this website. What's more, it does its job well, and can help you boost your productivity by keeping your eyes relaxed. Overclocking can be a thing of the past for AMD with the introduction of an improved version of its Turbo Capping Technology. The new Accelerated Boost Timer (A.B.T.) technology offers performance that is up to 50% greater than that of its predecessor. Of course, the A.B.T. technology will affect both single- and multi-GPU solutions, but AMD claims
