The menus are not cluttered with features, and the interface is well designed. The interface still isn't where Photoshop CS7 (2016) took it, but it's light years ahead of Photoshop's pixel-doubling nightmare since CS3. I know what's best for me: I'm cutting my teeth on Lightroom, and I'm using my workflow a lot before moving on to Photoshop. I hope that your workflow is the same. I can't claim Lightroom 5 is a fast program, but it's now the best product out there for people like me. Hopefully, with the new features, you can also experience a speedier Lightroom 5. If you're upgrading to Lightroom 5, there are lots of new features that can't be replicated with Photoshop. If you're a Lightroom faithful, then you're covered. If you're not a Lightroom user, you may want to take a look at Photoshop as an alternative workflow to Lightroom. No one will be able to provide you a better piece of art software—Photoshop is a work of art. Every now and then, I get a request for a different copy of the full Photoshop suite. First, let me say that any version that you purchase is a "professional" version of the program. You are required to register your license and include that information if you want to use it on multiple machines. You are not allowed to keep a copy of the "clean" versions that are available for free on the Internet. You are also not allowed to render a lower-resolution copy of those clean versions at full quality. Failing to obey these restrictions would get you in legal trouble.

The evolution we're making to GPU help us unlock creativity really is the evolution of the entire industry. It will mean making some very very hard decisions over the coming year or so, but it means pushing forward, always moving forward. If you need help further with the creative workflow substance, check out the blog and tutorials. You can also check out the 'must see' video on the Touchwood Studio blog, which shows Blend modes in Substance Designer.

Substance Designer: Site built in 2018, the official software editor of Substance Creator, the Substance Design system. The new version is capable of more, much more. SubD can even connect to other applications like After Effects and InDesign, so you can fine-tune the look and feel of all those desktop applications the way you'd expect anyone in professional creative environments to do. That cross-application support means SubImage support, native Photoshop channels, and tons of other new UI possibilities, especially in the synergistic Creative Cloud world of graphic designers. Post-workflow, a new feature is rolling out that allows you to share your files at different resolutions. When you make an adjustment (such as sharpening), you can propose a preferred resolution. The "As Preferred" keys is a toggle feature, and when you tap it, you can choose your desired resolution and apply that to the original file, or retain the original. As stated, it's proving to be a powerful stoke feature. This should be a feature of every editor's workflow.
