The Pen tool is very useful for sketching. With it, you can freely draw lines and shapes on the canvas. If that wasn't good enough, you can use the Rectangle tool to select a shape and create a selection around it. You can then use the Eraser tool to erase unwanted sections and clean up your sketch.

What It Does: The Move tool is handy for repositioning or relocating objects. With this tool and the corresponding anchor points, you can simply relocate objects to different positions in your design.

These options can be found in the Tools toolbox on the left-hand side of your main workspace area.

This toolbox works with both the left and right side of the canvas and with the hover tool. Each

option has room for descriptions. There are other features that aren't included here. **What It Does:**

The Gradient tool allows you to create vertical and horizontal lines of color. These tools are

extremely useful for when you need to refinish any design or add fine and irregular lines. **What It**

Does: The Pen tool can be used with the Shape tool to draw basic shapes. Like with the Shape tool,

you can also use the Direction tool to move your cursor around the page. You can erase anything you drew by using your eraser tool. **What It Does:** The Brush tool is probably the most popular of all of

the brushes. You can use it to apply any color to your canvas. You can change its size and shape for a couple different effects. The Brush tool works best when you need a quick fix for a broken image.
