For the Creative Cloud, the camera module has been deprecated in favor of the Camera Connection Kit. Distribute your app, and let people connect and use your app as a camera. You will also be able to distribute the Camera Connection Kit themselves; it will be on the Mac App Store when the new CoreML class paper goes online. I claim it's not a feature. It's a user experience. Not only do we score the new Photoshop as a great editor, but we also see it as a great device. There is the ability to use the new Camera Connection Kit, the Apple Pencil, Zoom to create new things, document camera feeds and a host of other ways to use this device.
