I have just installed LR 5.2 Beta and need some help in selecting objects from the category I want to add to. The 'move' selection tool is not available, as it always was in previous versions of Lightroom. Please help I just started to use the new version of Photoshop. It took a couple of days, just to get used to the new tools.

I'm happy with the new version, except the Facial Recognition tools are not really working properly for me. I'm not an artist, so I don't know if that's a personal issue or a "bug"...

I have to say, the new version is very buggy - even for an experienced Photoshop user. As well, I thought Adobe had moved from 32-bit to 64-bit but I installed the final version and it's still 32-bit version!

I hope that next release will be more stable. Now I was previously a Ray Charles fan and in my 17 years of listening to him I came to love his music. It breaks my heart to know he's gone, but I found I was missing his music. This is why I began searching for ways of listening to the man's music. I had a few options. I could download the songs through iTunes, or I could look into buying a digital music playback device. For cheap, I chose an Amazon Fire Stick. Then I looked into an app that can hold movies and music and even games for my Fire Stick. My first instinct was to choose Apple's AirPlay. There are apps on the App Store that used AirPlay to play songs from Apple Music, but I was looking for more flexibility and features.
